Summer Heat Safety
The standard academic year has come to end, congratulations to the CALS graduates, but summer activities on campus and at research stations have begun with a bang. Agriculture workers, because of the nature of their profession, spend a great deal of time outdoors in all types of weather. While the sun is needed to sustain crops, intense heat can cause potentially life-threatening illnesses. All agriculture workers and researchers should be familiar with the different heat-related illnesses, prevention steps, and medical responses to heat stress.

Any CALS personnel working in the summer heat and humidity should take the CALS Heat Stress Safety Training found by clicking this link or by going to https://www.talent.wisc.edu/catalog/default.aspx and search for Heat Stress

June is National Safety Month
Now, more than ever, safety is crucial both inside and outside the workplace, which is why the National Safety Council will still be recognizing National Safety Month® in June.

Share the Safety Message in June
This year, NSC will shine a spotlight on pressing topics, including, but not limited to:

- Mental Health
- Ergonomics
- Building a Safety Culture
- Driving

Public materials include a poster, tip sheets, articles, social media graphics and more! https://nsc-org-test.azurewebsites.net/workplace/national-safety-month

CALS Safety Website
Please take a few moments to familiarize yourself with the information and resources found at https://safety.cals.wisc.edu/
