

# Farm Vehicle Safety: Keeping Roads & Fields Safe

## Key Safety Points:

- **Vehicle Inspection:** Before use, always check the vehicle for any mechanical issues, including tire pressure, fuel levels, and fluid checks.
- **Speed Limits & Roads:** Follow speed limits, especially on public roads. When operating on farm roads, keep the vehicle under control and drive at a safe speed.
- **Field Operations:** Be mindful of uneven terrain when operating farm vehicles in fields. Slow down and take turns carefully to prevent tipping.
- **Visibility & Signaling:** Use headlights, flashers, and appropriate signals when moving farm vehicles, particularly when operating near roads or in low-visibility conditions.
- **Caution Around Other Vehicles:** Always be aware of other vehicles and machinery in the field or on public roads. Ensure clear communication with other operators.
- **Secure Loads:** Always ensure that loads are properly secured, and the vehicle is not overloaded. An unsecured load can cause tipping or loss of materials.
